# Flake Maker Exploration Questions

This activity is designed to allow the user to generate interesting, irregular fractals.

1. Use the [Flake Maker Activity](#) to build fractals from the following three generators:

   orderly structured growth

   accelerated growth

   abnormal growth

   Look at these three generators. How are they different? How are they the same? Do you expect a large difference in the fractals they generate? What do you observe?

2. Now change to a triangular grid and try the following generator:

Do you recognize this fractal? Compare it to [The Koch Snowflake](#).

3. Now that you have experimented with the software, try to build a "custom" figure, your version of the "prettiest picture."
